Section 7.4 UPS Efficiency Requirements

The Uninterruptible Power Supply (UPS) module efficiency shall be greater than or equal to 96% (>=96%) at full

Section 7.5 Battery Autonomy Requirements

The UPS battery energy storage system shall provide a minimum battery autonomy time of 15 minutes (>=15 mi

Section 7.6 Redundancy Topology

The total UPS configuration and power distribution topology must adhere to N+1 redundancy requirements to eli

Section 8.1 Emergency Generator System

Emergency backup diesel generators must store sufficient fuel to ensure a continuous runtime of at least 48 hou

Section 9.2 Cooling Systems

The central chilled water system and CRAC cooling infrastructure must provide N+1 redundancy across all active

Section 10.1 Battery Design Life

All VRLA or Lithium-ion battery modules installed within the UPS system must feature a minimum certified desig
